## BUILDING VALUE

# New IRS Rulings Affect Depreciation Deductions

By RAY A. SMITH  
Staff Reporter of THE WALL STREET JOURNAL

Some recent Internal Revenue Service decisions are affecting the way some real-estate investors seek tax deductions for depreciation.

There are two ways depreciation can be calculated on a tax return. One is full depreciation of the entire property over a span of 39 years for commercial and 27.5 years for residential properties. The other is through cost segregation, which is the itemization of individual building assets that aren't essential to the building's operations. These include carpeting or sidewalks or parking lots. The life spans of those components usually are shorter than for an entire property, so owners can depreciate them faster and benefit quicker.

In the past, some investors simply switched from one type of calculation to another without permission. Now, the IRS has decided that because of too many inconsistencies, the change must be made in a separate tax form. This decision applies to the tax year ended Dec. 31, 2003.

One caveat when it comes to switching calculation methods: Investors will need to have studies done by experts to calculate specific kinds of depreciation and those studies can be costly, says Gary C. Pokrant, a certified public accountant and tax principal with Reznick Fedder & Silverman, CPAs, P.C. in Bethesda, Md. Still, he says, compared with the tax savings, the costs are "modest."

In a separate action, called Revenue Procedure 2004-11, the IRS waived a rule that required investors to wait two years before changing the way they calculate depreciation. In the past, if investors bought a property and depreciated it one way in the first year of ownership and then realized that they would be better off if they calculated it the other way, the investors would have to wait another two years before they could change the calculation. Now, investors can make the change any year.

## TAX ADJUSTMENT

In December and January, the Internal Revenue Service issued decisions on depreciation that deal specifically with situations in which property owners want to change the way they calculate depreciation in order to reap benefits earlier or to recover depreciation they might have missed out on.

### Treasury Decision (TD) 9105

#### Chief Counsel Notice 2004-7:

Has to do with changing the accounting of depreciation.

In general, if you plan to change the way you calculate depreciation as a result of TD 9105 or the chief counsel notice, you must file an extra tax form with the IRS, Form 3115, Application for Change in Method of Accounting. Attach the original to the tax return. Send a copy of it to the IRS National Office.

For more information on this, go to the IRS's Web site, [www.irs.gov](http://www.irs.gov)<sup>1</sup>. Click on Tax Professionals under contents in the left column. Under topics, go to IRS Resources. Scroll down to Tax Regulations. Under Plain Language Regulations, click on January 2004 Plain Language Regulations and then scroll to Changes in Computing Depreciation.

### Revenue Procedure 2004-11:

Eliminates a two-year rule for making changes to the depreciation schedule of an asset. It also allows investors who sold a property to go back and change the depreciation calculation for prior tax years in certain circumstances.

To capture benefit from Revenue Procedure 2004-11 for previously sold property, you must file an amended tax return. You must also

What's more, if an investor sold a property in the same year in which he or she changed the depreciation, or took less depreciation than allowed or none at all, that investor can now recoup depreciation for previous tax years.

Mr. Pokrant offers this example. Take a building that is purchased in 2002 for \$10 million and the owner allocates 10% of the cost to land and depreciates the other 90% as building over a 39-year period. The owner then replaces all the carpeting and wallpaper in the building at a cost of \$500,000, depreciated as part of the building over 39 years, deducting \$233,795 in depreciation on his or her 2002 tax return.

But after having a cost-segregation study done, the owner determines that the land and improvements such as new carpeting should have been separated out and depreciated over a five-year period. He or she can now do a change in accounting on the 2003 tax return that results in a depreciation deduction of \$1.1 million, instead of \$243,580.

"The IRS made it easier for taxpayers to fix depreciation mistakes in the year after the property was purchased," says Julie A. Welch, a certified public accountant and director of the tax department at Meara, King & Co., a Kansas City, Mo., auditing and accounting firm.

Some accountants warn, however, that making accounting changes for past calculations can increase an investor's risk of being audited.
